Stabilization, Organic solvents, Anodes.

The purpose of the present investigation was to
establish whether detached eloxal films, which have
formed under suitable conditions, could be used as a
filter material for a direct electron-microscope
radiation, or, how uniformly the pores are developed
in this film. (Author)

The method is characterized by the fact that liquid
carbon dioxide is used as a solvent and the content
of chlorine dioxide at normal temperature is adjusted
to a maximum of 25% by weight. The liquid solution
only is withdrawn from the pressurized cylinder and
adjusted to the desired concentration of chlorine di-
oxide by vaporization in a current of air. The appa-
